

# VE SCIENCE

## Newsletter – August 2011 Newsletter

Vetter Environmental Sciences is pleased to welcome a new member to our Ve Family. Andrew T. McAuley has joined the team as our new Environmental Scientist. His extensive background in Consulting Services, Sampling, Data Interpretation, Report Prep, Construction Oversight and Project management will make him an excellent asset to our company.

Now that August is here and the summer has been unbearably hot, we just wanted to take a moment to remind you to keep hydrated. Dehydration is one of the main causes of preventable death among the elderly and shut in. It is recommended that we take in a minimum of at least eight (8) cups of water a day.

Also remember that heat and humidity in basements causes MOLD. Be sure to keep a humidifier on at all times during the summer months to keep your basement cool and dry.

Remember, Knowledge is key to living a happy and healthy life.

Until next month, be well my friends.
